

AREAS OF EXPERTISE

Cloud

Software *beyond expectations*

Banking Backend

For a major Italian banking institution, we collaborated with the backend development team of the online platform. Our activities included the development of business logic, as well as the design and deployment of data on both relational and non-relational databases.

Thousand Vehicles

For a company operating in the electric mobility sector, we collaborated with the backend development team. Our activities included the design, implementation, and maintenance of cloud infrastructure and business logic.

Identity Server

For a leading company in the event ticketing sector, we manage, maintain, and customize a server solution for centralized identity. This system also offers flexibility for white/private label solutions, allowing an external federated identity provider.
