

Press release

Teoresi Group accelerates its digital strategy: Teoresi DigiTech is launched, a new division dedicated to software, data and cloud

- *Teoresi Group completes the integration of BindingFuture, the Milan-based company acquired in 2023, and launches Teoresi DigiTech, a new division created to support clients and partners in the development of web, mobile, software and cloud solutions, while continuing to grow in strategic areas such as smart mobility, Industry 4.0, home automation and telemedicine.*
- *Among the most innovative projects of the new division are applications for industrial plant management; energy management platforms for buildings; remote control systems enabling telemedicine; cloud infrastructures for electric mobility; and e-ticketing applications.*

Digital transformation represents a strategic lever for the competitiveness of Italian companies. By 2026, ICT (Information and Communication Technology) budgets are expected to grow by 1.8% compared to the previous year, with sector growth driven mainly by small (3.3%) and medium-sized enterprises (5.2%). The main drivers are AI, data-driven solutions and cloud technologies. In particular, cloud is consolidating as an enabling infrastructure, with the Italian market exceeding **€8 billion** (a 20% increase compared to 2024).

To accelerate growth in these strategic areas, [Teoresi Group](#) - an international engineering company specialized in advanced technologies - has completed the integration of [BindingFuture](#), acquired in 2023, and launched **Teoresi DigiTech**, a new division that brings together the Group's expertise in **software, cloud, data and digital technologies**. The goal is to support clients and partners in their **digital transformation** and to develop cloud architectures, web and mobile applications, integrated systems and data-driven platforms, with AI support.

*"Teoresi DigiTech is the result of Teoresi's investments in digital technologies and, in particular, of the integration of BindingFuture, which has been part of the Group since 2023. We therefore decided to further enhance Teoresi Group's digital approach through a new visual identity built around the message 'Delivering Digital Experiences'. With this new division, we aim to support our partners in the development, design and delivery of advanced digital solutions," says **Valter Brasso, President and CEO of Teoresi Group**. "Teoresi DigiTech applies cutting-edge technologies across multiple domains - from connected mobility to*

smart ticketing, from predictive maintenance to telemedicine - leveraging solid expertise in web, mobile and cloud."

*"The experience gained in developing web, software, app, mobile and cloud solutions enabled BindingFuture to join Teoresi Group and evolve into a broader, more integrated structure capable of generating concrete synergies. This journey continues today with Teoresi DigiTech, the new division dedicated to digital technologies," comments **Silvia Dini, Business Unit Manager at Teoresi Group**. "DigiTech brings together two complementary approaches: Teoresi's engineering mindset and BindingFuture's digital specialization. The result is an end-to-end path that integrates cross-functional expertise across the Teoresi Group to deliver scalable, innovative solutions developed within complex ecosystems, in collaboration with universities and technology partners."*

Teoresi DigiTech enables Industry 4.0 with data analytics, AI and cloud -

The new division supports companies across multiple sectors - from manufacturing to high-tech - in their transition to Industry 4.0, integrating software development, data analytics, Artificial Intelligence, cloud and edge computing into scalable digital solutions. These solutions enable monitoring of plants and processes, improve operational continuity and increase production efficiency. Key applications include **platforms for predictive maintenance and Big Data analytics**, systems based on private 4G/5G networks for remote factory control, and **cloud and edge architectures designed to ensure security**, reliability and high performance. Teoresi DigiTech also develops human-centered interfaces and **AR/VR solutions to support operators and technicians in the field**, alongside digital manufacturing technologies and advanced prototyping.

Home automation and telemedicine for smart buildings and future cities

Teoresi DigiTech's cross-functional expertise supports the transformation of cities into **connected sustainable ecosystems focused on people's well-being**. The division develops solutions for intelligent management of buildings and infrastructures, energy control and security, connectivity of home devices and advanced digital services. The offering also includes platforms for **telemedicine, remote monitoring and e-health**, integrating medical devices, AI algorithms and advanced connectivity, as well as **sophisticated interfaces and remote-control systems** for managing devices and service infrastructures, helping create safer, more efficient and more accessible spaces.

From autonomous mobility to smart ticketing - Teoresi DigiTech's capabilities range from applications for **connected cars and onboard data management** to platforms for **autonomous driving and ADAS systems**; from **e-mobility and fleet data management**, with tools for monitoring electric vehicles, smart charging and performance analysis, to **multi-mobility and smart ticketing** solutions that integrate transport modes, services and infrastructure to simplify the urban mobility experience.

Teoresi Group

Teoresi was founded in Turin in 1987 as an IT consulting company. Today, Teoresi Group is an international engineering company operating in four countries: Italy, Germany, the United States and Switzerland, with a total of 27 operating sites. Of the 15 locations in Italy, these include Turin, Milan, Modena, Rome and Naples. Teoresi Group supports companies in the development of projects using cutting-edge technologies, ranging from autonomous driving to AI applied to medical diagnostics. With strong global engineering expertise, Teoresi Group provides design, development and technology consulting services, focusing on the innovative aspects of each engineering challenge. It works alongside clients from analysis to the conception of the final product, from the initial idea to the prototype, and from the prototype to the market. Since 2023, Teoresi Group's growth has also been driven by external expansion through strategic acquisitions. **HiFuture**, specializing in hardware and firmware, and **BindingFuture**, with strong know-how in web solutions, mobile applications and cloud technologies, have joined the Group. In particular, Teoresi **acquired full ownership of BindingFuture in 2026**. The Group has also integrated the products of the Milan-based company IO.T Solutions, which specializes in smart building technologies and solutions designed to improve workplace comfort, optimize building management and reduce energy consumption. Teoresi Group has also launched **Teoresi MedTech**, the result of the Group's investments in the healthtech sector and the acquisition, in 2023, of the Bologna-based company **MediCon Ingegneria**. Finally, in 2026, Teoresi DigiTech was established as an internal division dedicated to the development and integration of digital technologies across the Group's different areas of activity.
